Feiling's MODERN TRENDS in NEUROLOGY

New! This new reference work correlates for every-day use the clinical aspects of the new knowledge of the nervous system which has emerged in recent years. The authors from this country and abroad cover only those areas which have seen substantial recent progress.

By 22 Authors; Edited by ANTHONY FEILING, M.D., F.R.C.P., 676 pp., 245 illus., \$13.50

Grace, Wolf & Wolff's

THE HUMAN COLON

New! From direct observation of exposed segments of colon in four fistulous patients, the authors demonstrate the colonic changes which occur during experiences such as anger, satisfaction, and pain. Evidence is presented linking emotions not only to functional disorders but also to structural lesions of the colon with tissue pathology. Vivid color plates show you the changes discussed.

By WILLIAM J. GRACE, M.D., STEWART WOLF, M.D., and HAROLD G. WOLFF, M.D., *Cornell Univ. Medical School*. With a foreword by ALAN GREGG, M.D., 256 pp., 112 illus., 31 in full color, \$7.50.

Nielsen's TEXTBOOK of CLINICAL NEUROLOGY

INTEGRATION

through EDUCATION

with THERAPY

CONSIDERING the appalling number of neurotic, maladjusted adults in our present society, the great hope for tomorrow is that a higher percentage of today's children will achieve a better-balanced integration . . . raising, if only by a little, the level of psychosexual maturity in the entire social order.

When, in your practice, you see a school-age patient in need of specialized guidance and education, we invite you to let us evaluate the potential outcome. When the intelligence is normal, but emotional disturbances are interfering with normal personality development—hampering the ability to learn—our experienced staff will carefully study the details and offer a considered report.
